

Password Reset Guide

Nimbus Cloud Platform | Category: Account & Access | Last updated: February 2026

1. Resetting Your Password (Standard Flow)

If you know your current email address but have forgotten your password, follow these steps:

- 1 Go to app.nimbuscloud.io/login and click **Forgot password?** below the password field.
- 2 Enter the email address associated with your Nimbus account and click **Send reset link**.
- 3 Check your inbox for an email from no-reply@nimbuscloud.io with the subject line "Reset your Nimbus password." The reset link is valid for 60 minutes from the time it is sent.
- 4 Click the link, which opens a secure reset page. Enter a new password meeting the requirements in Section 4.
- 5 Once submitted, you will be automatically logged out of all existing sessions on all devices and redirected to the login page to sign in with your new password.

2. If the Reset Email Doesn't Arrive

Reset emails are typically delivered within 1-2 minutes. If you don't see it:

- 1 Check your spam/junk folder — this resolves the issue in the majority of reported cases.
- 2 Confirm you entered the email address that the account was originally created with. Nimbus does not reveal whether an email address exists in its system (for security reasons), so a typo will silently produce no email rather than an error message.
- 3 Add no-reply@nimbuscloud.io to your contacts or safe senders list, then request a new link.
- 4 Wait at least 10 minutes before requesting another reset link. Nimbus limits reset requests to 3 per email address per hour to prevent abuse; exceeding this temporarily blocks further attempts for that hour.

If none of the above resolves it after 30 minutes, this should be escalated to support for a deliverability check, as it may indicate an issue with the customer's email provider blocking Nimbus's sending domain.

3. If the Reset Link Has Expired

Reset links expire 60 minutes after being sent, and can only be used once. If you click an expired or already-used link, you will see an "This link is no longer valid" message with a button to request a new one. Simply repeat the process in Section 1 — there is no limit on how many times you can restart the flow, only on how many emails can be sent per hour (Section 2).

4. Password Requirements

Requirement	Detail
Minimum length	10 characters

Character mix	At least 1 number and 1 symbol
Breach check	Rejected if found in known breached-password databases
Reuse policy	Cannot match any of your last 5 passwords
Forced expiration	None — no mandatory periodic rotation required

5. Resetting a Password While Locked Out

A successful password reset automatically clears a standard failed-login lockout (5 failed attempts within 15 minutes) immediately, regardless of the normal 30-minute lockout timer. However, it does **not** lift a security hold triggered by an unusual login location or device — that requires confirming the "new sign-in" email separately. See the Account Lockout guide for full details on lockout types.

6. Multi-Factor Authentication (2FA) and Password Resets

If 2FA is enabled on the account, resetting the password does not disable or bypass 2FA — you will still be prompted for your authenticator code after entering the new password. If you have also lost access to your 2FA device, password reset alone cannot restore access; this requires identity verification through support, since bypassing 2FA verification is treated as a high-risk account recovery scenario.

7. Workspace Admin-Initiated Resets

Workspace Owners and Admins cannot set or view another user's password directly. From Settings → Team → Members, an admin can only trigger a "Send password reset email" action on behalf of a locked-out team member, which sends the same self-service flow described in Section 1 to that user's email address. This design ensures no one but the account holder ever has access to their own credentials.

8. When to Escalate to a Human Agent

- The user no longer has access to the email address on file (requires identity verification — cannot be self-served).
- Reset emails are confirmed not arriving after 30+ minutes and basic deliverability checks (Section 2) have been ruled out.
- The user has also lost access to their 2FA device (Section 6).
- A pattern of repeated reset requests on the same account suggests a possible account-takeover attempt rather than a genuine forgotten password.
